REFRIGERATORS TERMINALS

The refrigeration terminals are the collection point of the foodstuffs that will be subsequently distributed over the territory.

For this reason, it is essential to have special spaces ready to receive the different types of food products for better storage, from a few hours to whole days.

Madefrigor is the ideal partner for the development of a refrigerated logistics platform.

In addition, the expansion of the outsourcing logistics, with the outsourcing of services, imposes a reliable and experienced partner that can propose a high performance system with low operating costs.

Many consultants and installers are not yet properly prepared, for example, on CO2 systems that are proving to be an optimal solution.

Madefrigor, on the other hand, uses all kinds of refrigerant agents for direct expansion systems or flooding systems, both in pumps and for gravity.

REFRIGERATED LOGISTICS

Madefrigor for over 40 years realizes projects and systems in the field of industrial refrigeration: air conditioning systems, cold rooms in low temperature, cold rooms at controlled temperature.

Our systems are all studied to work with green fluids.

Our technical department provides all its experience to those customers who are interested in developing and building a refrigerator terminal or warehouses for storing and processing fruit and vegetables. Contact us, our operator will be at your disposal to advise you on your important choices.

CHILLERS AND REFRIGERATION UNITS

The Italian challenge is renewed

Madefrigor S.r.l., a leading company in the production of storage and refrigeration plants, operates internationally with over 40 years of experience in the sector, acquiring the know-how and engineering knowledge.

Today the aim is to give our customers a wide range of solutions and advantages by reducing overall costs and maintaining the high quality of the machines and performance.

We are at the complete service for every type of request and we carry out free consulting. Our technical department evaluates the needs of the customer and designs the machines in a specific way and in detail.

In the workshop, highly skilled workers and certified welders provide assembly. Once the machine is finished, the necessary operations for certification and blank testing are carried out.

Madefrigor does not manufacture standard machines but customized products directed to every single need of the compartments or sectors that work with the cold
